The chapters parallel those presented in the Core Curriculum for Oncology Nursing, 4e. The number of questions in each chapter will correspond with the percentage of questions on that particular topic included in the certification exam. Answers and rationales for correct and incorrect responses are listed at the end of each chapter. The book also includes an updated bibliography for each subject.

The Core Curriculum covers physiology, chemistry, psychology of renal failure, life on dialysis, and technology including water treatment, safe cannulation, and equipment. It helps teach new dialysis technicians and nurses to be capable and compassionate care providers who understand what to do  $\zeta$  and why.

The U.S. patent system is in an accelerating race with human ingenuity and investments in innovation. In many respects the system has responded with admirable flexibility, but the strain of continual technological change and the greater importance ascribed to patents in a knowledge economy are exposing weaknesses including questionable patent quality, rising transaction costs, impediments to the dissemination of information through patents, and international inconsistencies. A panel including a mix of legal expertise, economists, technologists, and university and corporate officials recommends significant changes in the way the patent system operates. A Patent System for the 21st Century urges creation of a mechanism for post-grant challenges to newly issued patents, reinvigoration of the non-obviousness standard to quality for a patent, strengthening of the U.S. Patent and Trademark Office, simplified and less costly litigation, harmonization of the U.S., European, and Japanese examination process, and protection of some research from patent infringement liability.
