I grew up listening to my dad's Sony Integrated Amplifier TA-88 and the ST-88 Stereo Tuner. I found it in storage recently. Turned it on and it was working and sounded great. However, the last time i turned it on the power went on the amplifier. From the discussions here I presume it needs a new power unit.

Recent radical changes in timecode technology, location shooting and post-production working practices have been brought about by the fragmentation of the television programme making industry and by a dramatic increase in affordable digital transmission and editing equipment and systems. With the expansion of non-traditional television service producers (cable, satellite and video-on-demand) almost anything goes as far as shooting and editing formats are concerned. Timecode: A User's Guide is an indispensable reference for anyone needing to get to grips with the many aspects of timecode, whether in-house or on location. Taking into account these changes this book has now been brought completely up to date to include: \* timecode and DVD, LTC & VITC in HANC packets in the serial digital TV interfaces \* timecode in IEEE1395 (Firewire) \* timecode and digital video cassettes \* new recording formats of DVD, DV mini cassettes and D6 are included \* 4:3 scanning for wide-screen films - standards updated \* new material to cover new working practices \* new appendices to cover the global LF time data transmissions and time data embedded in BBC transmissions Advice is also given on avoiding and remedying faults and errors.
