Apex uses this method to determine equality and uniqueness for your objects. For more information on providing an equals method, see Using Custom Types in Map Keys and Sets. If the list contains String elements, the elements are case-sensitive. Two list elements that differ only by case are considered distinct.

List Class | Apex Developer Guide | Salesforce Developers

Map keys and values can be of any data type—primitive types, collections, sObjects, user-defined types, and built-in Apex types. Uniqueness of map keys of user-defined types is determined by the equals and hashCode methods, which you provide in your classes.
