The power of the Arduino is not its ability to crunch code, but rather its ability

to interact with the outside world through its input-output (I/O) pins. The

Arduino has 14 digital I/O

pins labeled 0 to 13 that can be used to turn motors

Guide. The standard I2C library for the Arduino is the Wire library. While this library is sufficient most of the time, there are situations when it cannot be used: the I2C pins A4/A5 (or SDA/SCL) are in use already for other purposes. same I2C addresses devices are used.
