Bird banding properly done is neither cruel nor in any other way harmful. The weight of the bits of aluminum or copper from which the bands are made does not burden the birds, and if the bands are correctly placed there is slight danger of their becoming caught on twigs, thorns, or nesting material.

Between 1964 and 1975, 2.6 million American personnel served within the borders of South Vietnam during the Vietnam War, of whom an estimated 1–1.6 million actually fought in combat. At the tip of the spear was the infantry, the "grunts" who entered an extraordinary tropical combat zone completely alien to the world they had left behind in the United States. In South Vietnam, and occasionally spilling over into neighboring Laos and Cambodia, they fought a relentless counterinsurgency and conventional war against the North Vietnamese Army (NVA) and Viet Cong (VC). The terrain was as challenging as the enemy – soaring mountains or jungle-choked valleys; bleached, sandy coastal zones; major urban centers; riverine districts. Their opponents fought them with relentless and terrible ingenuity with ambushes, booby traps, and mines, then occasionally with full-force offensives on a scale to rival the campaigns of World War II. This pocket manual draws its content not only from essential U.S. military field manuals of the Vietnam era, but also a vast collection of declassified primary documents, including rare after-action reports, intelligence analysis, firsthand accounts, and combat studies. Through these documents the pocket manual provides a deep insight into what it was like for infantry to live, survive, and fight in Vietnam, whether conducting a major airmobile search-and-destroy operation or conducting endless hot and humid small-unit patrols from jungle firebases. The book includes infantry intelligence documents about the NVA and VC threats, plus chapters explaining hard-won lessons about using weaponry, surviving and moving through the jungle, tactical maneuvers, and applications of the ubiquitous helicopter for combat and support.

Brick and Block Masonry - Trends, Innovations and Challenges contains the lectures and regular papers presented at the 16th International Brick and Block Masonry Conference (Padova, Italy, 26-30 June 2016). The contributions cover major topics: - Analysis of masonry structures - Bond of composites to masonry - Building physics and durability - Case studies - Codes and standards - Conservation of historic buildings - Earthen constructions - Eco-materials and sustainability - Fire resistance, blasts, and impacts - Masonry bridges, arches and vaults - Masonry infill walls and RC frames - Masonry materials and testing - Masonry repair and strengthening - New construction techniques and technologies - Reinforced and confined masonry - Seismic performance and vulnerability assessment In an ever-changing world, in which innovations are rapidly implemented but soon surpassed, the challenge for masonry, the oldest and most traditional building material, is that it can address the increasingly pressing requirements of quality of living, safety, and sustainability. This abstracts volume and full paper USB device, focusing on challenges, innovations, trends and ideas related to masonry, in both research and building practice, will prove to be a valuable source of information for researchers and practitioners, masonry industries and building management authorities, construction professionals and educators.
