Includes Part 1, Number 2: Books and Pamphlets, Including Serials and Contributions to Periodicals July - December)

Research is integrated into the whole fabric of modern-day society and culture. It affects our lives in so many waysfrom finding a job to knowing how to manage our health. Information studies designed to understand this array of information encompasses a wide expanse of disciplines. Many of these areas draw their philosophical and research bases from a mixture of disciplines within the social sciences and the humanities. This book takes a holistic view of these diverse areas and shows how they are united through the common thread of enhancing our knowledge of and understanding the world in which we all live.

Statistics in Education and Psychology aims to develop a coherent, logical and comprehensive outlook towards statistics. The subject involves a wide range of observations, measurements, tools, techniques and data analysis. This book covers diverse topics like measures of central tendency, measures of variability, the correlation method, normal probability curve (NPC), significance of difference of means, analysis of variance, non-parametric chi-square, standard score and T-score.
