The Biologising of Childhood | Developmental Psychology ...
Developmental psychologists have long been fascinated by children's drawings; for a number of reasons, including the use of drawings as an index of cognition. One of Piaget's central claims is that the young child should be thought of as 'egocentric'. A formulation first applied by Piaget to language—use and social cognition, and subsequently to spatial representation.

Conclusions | The Biologising of Childhood | Taylor ...
The prenatal period is of interest to developmental psychologists who seek to understand how the earliest influences on development can impact later growth during childhood. Psychologists may look at how primary reflexes emerge before birth, how fetuses respond to stimuli in the womb, and the sensations and perceptions that fetuses are capable of detecting prior to birth.

Understanding Stages in Developmental Psychology
Child psychology is one of the many branches of psychology and one of the most frequently studied speciality areas. This particular branch focuses on the mind and behavior of children from prenatal development through adolescence. Child psychology deals not only with how children grow physically, but with their mental, emotional, and social development as well.

Child Psychology and Development
Developmental psychology looks at how thinking, feeling, and behavior change throughout a person ' s life. A significant proportion of theories within this discipline focus upon development during childhood, as this is the period during an individual's lifespan when the most change occurs.

Freud proposed one of the best-known grand theories of child development. According to Freud ' s psychosexual theory, child development occurs in a series of stages focused on different pleasure areas of the body. During each stage, the child encounters conflicts that play a significant role in the course of development.

The Biologising of Childhood: Developmental Psychology and ...
Developmental psychology generally focusses on how and why certain changes (cognitive, social, intellectual, personality) in the course of a human life occur over time. There are many theorists who have made a profound contribution to this area of psychology. One of them, Erik Erikson developed a model of eight stages of psychological development. He believed that humans developed in stages throughout their lifetimes and that this would affect their behaviors .
