Cybernetics Or The Control And Cybernetics: Or Control and Communication in the Animal and the Machine is a book written by Norbert Wiener and published in 1948. It is the first public usage of the term "cybernetics" to refer to self-regulating mechanisms. The book laid the theoretical foundation for servomechanisms, automatic navigation, analog computing, artificial intelligence, neuroscience, and reliable communications. A second edition with minor changes and two additional chapters was published in 1961.~~

"Cybernetics typically denotes the interdisciplinary study and strategic deployment of communicative control processes in "complex systems" constituted by humans, other animals, machines, and the rest of living-nature. In what follows, I wish to suggest an even broader use of this term.

Cybernetics is a transdisciplinary approach for exploring regulatory systems—their structures, constraints, and possibilities. Norbert Wiener defined cybernetics in 1948 as "the scientific study of control and communication in the animal and the machine".. Cybernetics is applicable when a system being analyzed incorporates a closed signaling loop—originally referred to as a "circular ...

With the influential book *Cybernetics*, first published in 1948, Norbert Wiener laid the theoretical foundations for the multidisciplinary field of cybernetics, the study of controlling the flow of information in systems with feedback loops, be they biological, mechanical, cognitive, or social. At the core of Wiener's theory is the message (information), sent and responded to (feedback); the functionality of a machine, organism, or society depends on the quality of messages.

We have decided to call the entire field of control and communication theory, whether in the machine or in the animal, by the name *Cybernetics*, which we form from the Greek [word for] steersman ... we also wish to refer to the fact that the steering engines of a ship are indeed one of the earliest and best developed forms of feed-back mechanisms.

Year 88 - 1948: Cybernetics, or, Control and Communication ...

Wiener defined cybernetics as "the science of control and communications in the animal and machine." This definition relates cybernetics closely with the theory of automatic control and also with physiology, particularly the physiology of the nervous system. For instance, a "controller" might be the human brain, which might receive signals from a "monitor" (the eyes) regarding the distance between a

reaching hand and an object to be picked up.
