Let us define the position vector $r(x,y,z) = x\mathbf{i} + y\mathbf{j} + z\mathbf{k}$ (11.13) We can construct the three unit vectors using the following formula: $\mathbf{e}_x = \frac{1}{r} \frac{\partial r}{\partial x} \mathbf{i} = \frac{x}{r} \mathbf{i}$, $\mathbf{e}_y = \frac{1}{r} \frac{\partial r}{\partial y} \mathbf{j} = \frac{y}{r} \mathbf{j}$, $\mathbf{e}_z = \frac{1}{r} \frac{\partial r}{\partial z} \mathbf{k} = \frac{z}{r} \mathbf{k}$ (11.14) that is, the unit vectors are the direction of change of the position with respect to the coordinates.

Statics is typically the first engineering mechanics course taught in university-level engineering programs. It is the study of objects that are either at rest, or moving with a constant velocity. Statics is important in the development of problem solving skills. It teaches you to think about how forces and bodies act and react to one another.
