It's here - the recommended sequel to the Jacobs math series. Paul Foerster taught math beginning in 1961 and puts his teaching expertise to work in this text which is designed as a course in intermediate and advanced algebra and trigonometry. After completing algebra 1 and geometry, this book is the next step before calculus. The presentation emphasizes the role of algebra and trigonometry as the foundation for calculus and should take a student 1 1/2 to 2 years for completion.

In this text, algebra and trigonometry are presented as a study of special classes of functions. In the process, relationships between theory and real-world applications are thoroughly explored, bringing the material to life. Suitable for a second-year course, a trigonometry course, or a pre-calculus course.

"The text is suitable for a typical introductory algebra course, and was developed to be used flexibly. While the breadth of topics may go beyond what an instructor would cover, the modular approach and the richness of content ensures that the book meets the needs of a variety of programs."--Page 1.

Precalculus with Trigonometry: Concepts and Applications

This highly motivational text approaches the study of algebra with imaginative applications and clear problems derived from the real world. Technology tools are used to assist with time-consuming calculations and to integrate graphing and problem-solving skills.
