As mentioned on the previous page, the World Wide Web makes use of hypertext to access the various forms of information available on the world's different networks. This allows people all over the world to share knowledge and opinions. We typically access the Web through browsers, like Internet Explorer, Chrome and Mozilla Firefox. By using browsers like these, you can visit various Web sites and view other online content.

Web ... English 5th Edition Amazon.in

The terms Internet and World Wide Web are often used without much distinction.

However, the two terms do not mean the same thing. The Internet is a global system of interconnected computer networks. In contrast, the World Wide Web is a global collection of documents and other resources, linked by hyperlinks and URIs.

World Wide Web - Wikipedia

What's The Difference

**Between The Internet And
World Wide Web?**

The World Wide Web (WWW) is one set of software services running on the Internet. The Internet itself is a global, interconnected network of computing devices. This network supports a wide variety of interactions and communications between its devices. The World Wide Web is a subset of these interactions and supports websites and URIs.
