two topics in causal analysis that are closely related and often confused. Suppose we have three variables, X , M and Y . We say that M is a mediator of the effect of X on Y if X carries its influence on Y at least partly by influencing M , which then influences Y . This is also known as an indirect effect of X on Y

edition). New York: The Guilford Press.

PROCESS is a macro for SPSS and SAS that

conducts observed-

variable mediation,

moderation, and

conditional process

analysis. It is

documented in

Appendices A and B of

Hayes (2018).

~~SPSS, SAS, and R~~

Page 32/36

~~Andrew F. Hayes, Ph.D.~~

meaning that

“mediation is

moderated”. When a or

b is moderated, it is

sensible then to estimate

“conditional indirect

effects”—values of

indirect effect

conditioned on values of

the moderator variable

that moderates a and/or

b. Direct effects can also

Sciences

Download

Ebook

be conditional. For instance, in the above, W moderates X 's direct effect on Y . X
