A tractor repair manual written for the experienced mechanic by professionals in an easy-to-use format , including numerous photos, illustrations and exploded views.

"Excess nutrients are a pervasive problem of streams, lakes, and coastal waters. The current report, "The Quality of our Nation's Waters--Understanding the Effects of Nutrients on Stream Ecosystems in Agricultural Landscapes," presents a summary of results from USGS investigations conducted from 2003 to 2011 on processes that influence nutrients and how nutrient enrichment can alter biological components of agricultural streams. This study included collecting data from 232 sites distributed among eight study areas. This report summarizes findings on processes that influence nutrients and how nutrient enrichment can alter biological communities in agricultural streams. These findings are relevant to local, state, regional, and national decision-makers involved in efforts to (1) better understand the influence of nutrients on agricultural streams, (2) develop nutrient criteria for streams and rivers, (3) reduce nutrients to streams and downstream receiving waters, and (4) develop tools for tracking nutrient and biological conditions following nutrient reduction strategies. All NAWQA reports are available online at <https://water.usgs.gov/nawqa/bib/>" --Provided by publishe

Vols. for 1970-71 includes manufacturers' catalogs.
