Using Jython within Java Applications ¶ Often times, it is handy to have the ability to make use of Jython from within a Java application. Perhaps there is a class that would be better implemented in the Python syntax, such as a Javabean. Or maybe there is a handy piece of Jython code that would be useful within some Java logic.

Using jythonc A script called jythonc should have been installed in the Jython installation directory when you installed the package. If it was not, it can be invoked as follows: `jython Tools\jythonc\jythonc.py`. The jythonc tool generates actual Java source code, and then invokes a Java compiler over this source code to create the.class files.

Jython has a known issue with the thread safety of imports. To work around this issue, you can use a system-wide lock available with the Jython Scripting origin to synchronize imports between threads and between pipelines. In your script, acquire the lock, import all needed modules, and then release
