Zubrick provides students with a valuable guide to the basic techniques of the Organic Chemistry lab. The book will help students understand and practice good lab safety. It will also help students become familiar with basic instrumentation, techniques and apparatus and help them master the latest techniques such as interpretation of infrared spectroscopy. The guide is mostly macroscale in its orientation.

Shows science students how to write a clear and to the point laboratory report.

Addresses a Global Challenge to Sustainable Development
Advances in Biodegradation and Bioremediation of
Industrial Waste examines and compiles the latest
information on the industrial waste biodegradation process
and provides a comprehensive review. Dedicated to
reducing pollutants generated by agriculturally
contaminated soil, and plastic waste from various industries,
this text is a book that begs the question: Is a pollution-free
environment possible? The book combines with current
available data with the expert knowledge of specialists from
around the world to evaluate various aspects of
environmental microbiology and biotechnology. It
emphasizes the role of different bioreactors for the
treatment of complex industrial waste and provides specific

chapters on bioreactors and membrane process integrated with biodegradation process. It also places special emphasis on phytoremediation and the role of wetland plant rhizosphere bacterial ecology and the bioremediation of complex industrial wastewater. The authors address the microbiological, biochemical, and molecular aspects of biodegradation and bioremediation which cover numerous topics, including microbial genomics and proteomics for the bioremediation of industrial waste. This text contains 14 chapters and covers: Bioprocess engineering and mathematical modelling with a focus on environmental engineering The roles of siderophores and the rhizosphere bacterial community for phytoremediation of heavy metals Current advances in phytoremediation, especially as it
