By one estimate, 90 percent of all of the data in history was created in the last two years. In 2014, International Data Corporation calculated the data universe at 4.4 zettabytes, or 4.4 trillion gigabytes. That much information, in volume, could fill enough slender iPad Air tablets to create a stack two-thirds of the way to the moon. Now, that's Big Data. Coal, iron ore, and oil were the key productive assets that fueled the Industrial Revolution. The vital raw material of today's information economy is data. In *Data-ism*, New York Times reporter Steve Lohr explains how big-data technology is ushering in a revolution in proportions that promise to be the basis of the next wave of efficiency and innovation across the economy. But more is at work here than technology. Big data is also the vehicle for a point of view, or philosophy, about how decisions will be—and perhaps should be—made in the future. Lohr investigates the benefits of data while also examining its dark side. *Data-ism* is about this next phase, in which vast Internet-scale data sets are used for discovery and prediction in virtually every field. It shows how this new revolution will change decision making—by relying more on data and analysis, and less on intuition and experience—and transform the nature of leadership and management. Focusing on young entrepreneurs at the forefront of data science as well as on giant companies such as IBM that are making big bets on data science for the future of their businesses, *Data-ism* is a field guide to what is ahead, explaining how individuals and institutions will need to exploit, protect, and manage data to stay competitive in the coming years. With rich examples of how the rise of big data is affecting everyday life, *Data-ism* also raises provocative questions about policy and practice that have wide implications for everyone. The age of data-ism is here. But are we ready to handle its consequences, good and bad?

Against the backdrop of ancient cultures, a communist legacy and eventual institutional atrophy, many of the societies of Central and Eastern Europe have pursued aggressive development trajectories since the early 1990s. This part of Europe is now characterized by a rising economic heterogeneity and a rapidly changing socio-cultural context, underscored by waves of restructuring, privatization, increasing foreign direct investment and an emerging individualism. While there has been a growing interest in the transition economies in the past number of years, the contemporary nature of human resource management in these societies is not well-documented. This long-awaited text seeks to chart the contemporary landscape of HRM in this region. In doing this, it describes key aspects of the transition

The world of business is constantly evolving and management education institutions will likely face a number of challenges in keeping up with these changes. While most books focus on the needs of management education institutions, this work addresses the needs of the corporate world in the era of the Fourth Industrial Revolution. Featuring an extensive research study spanning 11 countries, it offers a unique perspective on the business challenges and developmental needs of companies in emerging and recently emerged economies, and on the missing links between those needs and management education. Using both company-specific and country-level data, the book provides businesses and educators with rare insights and recommendations on strengthening existing partnerships (or establishing them anew) between management education institutions and the corporate sector in order to make management education relevant for the 21st century. The book argues that ‘ relevance ’ should take the center-stage of all higher education institutions in order to accomplish their third mission, namely service to society. This is especially important for management education institutions, whose mission is to mold future managers and leaders who can have a significant influence on economic success and the wellbeing of society.

The Eurozone crisis and the age of austerity, as well as challenges to the environment as a result of economic growth have highlighted the need for a greater understanding of those facets of economics that are of most use to businesses and their decision makers. This book introduces all of the relevant theoretical aspects of the subject and applies them to real-life examples of economics that are of particular interest to students today, including: the impact of globalization; the way in which ‘ green ’ perspectives can be built into decision making and how the financial crisis has challenged economists, politicians and business people to rethink their existing ideas. Replete with illuminating case studies, and benefitting from features such as activities, review questions and further reading, Business Economics introduces the theory and practice of economics for non-specialist students new to the topic.
