Today, most people know that
landmasses on Earth move
around, but people haven't
always believed this. It
wasn't until the early 20th
century that German
scientist Alfred Wegener put

forth the idea that the Earth's continents were drifting. He called this movement Continental Drift. He was not the first or only person to think this, but he was the first to talk about the idea publicly.

plate tectonics and
continental drift is that
plate tectonics describes
