Media Psychology examines the impact that 21st century media use has on human behavior, from teenage crushes on pop stars to soap fandom in adulthood. It brings together North American communication research with European media research in a variety of disciplines--psychology, sociology, communication and media studies--and in doing so, maps out the territory for media psychology. David Giles argues that psychologists have been guilty of ignoring the influence of the media over the last century, seeing it at best as a minor nuisance that will eventually go away. However, with the increasing prevalence of new electronic forms of mass communication, the media seem to have a greater influence than ever over our daily lives. In this book, Dr. Giles tackles the traditional topics of media psychology--sex, violence, advertising--along with sections on developmental aspects of media influence and the psychology of the audience. He also examines a number of specific media genres--news, sports, soaps, and the increasingly popular audience participation media, such as "reality" and "lifestyle" television. In addition, he asks what light psychology can shed on the popularity of these genres and the response of their audiences. Finally, there are chapters on the increasing influence of the Internet and on the representation of psychology and psychologists themselves in the media.

Stripping away the hype, this book describes how, when, and why media violence can influence children of different ages, giving parents and teachers the power to maximize the media's benefits and minimize its harm. ▯ Includes the newest research on topics of particular concern today, including cyber-bullying, video games, song lyrics, and brain development ▯ Covers all major media, including television, movies, music, video games, and the Internet ▯ Describes the psychological processes through which media violence influences attitudes, emotions, and behaviors ▯ Provides the context necessary to understand why media violence does not affect everyone the same way ▯ Discusses how media violence intersects with public policy, identifies the problems with the existing rating systems, and suggests strategies to improve the situation and foster children's healthy development

The question of trust is crucial in the field of health. First, because health is indicative of particularly strong issues at the societal, regulatory, institutional or individual levels; secondly, because the boundaries between specialized information validated by legitimate instances and uncommitted information have become permeable; finally, because it appears to be central within relations between actors in the field. In this book, we propose to address the trust in terms of the information and communication phenomena that are at work in the health sector, and to look at the process of building the legitimacy of information in the health sector. health.

Divided into three sections, Error brings together established critics and emerging voices to offer a significant contribution to the field of new media studies. In the first section, "Hack," contributors explore the ways in which errors, glitches, and failure provide opportunities for critical and aesthetic intervention within new media practices. In the second section, "Game," they examine how errors allow for intentional and accidental co-opting of rules and protocols toward unintended ends. The final section, "Jam," considers the role of error as both an inherent "counterstrategy" and a mode of tactical resistance within a network society. By offering a timely and novel exploration into the ways in which error and noise "slip through" in systems dominated by principles of efficiency and control, this collection provides a unique take on the ways in which information theory and new media technologies inform cultural practice.

Understanding Media Psychology is the perfect introductory textbook to the growing field of media psychology and its importance in society, summarizing key concepts and theories to provide an overview of topics in the field. Media is present in almost every area of life today, and is an area of study that will only increase in importance as the world becomes ever more interconnected. Written by a team of expert authors, this book will help readers to understand the structures, influences, and theories around media psychology. Covering core areas such as positive media psychology, the effects of gaming, violence, advertising, and pornography, the authors critically engage with contemporary discussions around propaganda, fake news, deepfakes, and the ways media have informed the COVID-19 pandemic. Particular care is also given to addressing the interaction between issues of social justice and the media, as well as the effects media has on both the members of marginalized groups and the way those groups are perceived. A final chapter addresses the nature of the field moving forward, and how it will continue to interact with closely related areas of study. Containing a range of pedagogical features throughout to aid teaching and student learning, including vocabulary and key terms, discussion questions, and boxed examples, this is an essential resource for media psychology courses at the undergraduate and introductory master's level globally.

ECHNOLOGICAL PROSPECTS AND SOCIAL APPLICATIONS SET Coordinated by Bruno Salgues There are many controversies with respect to health crisis management: the search for information on symptoms, misinformation on emerging treatments, massive use of collaborative tools by healthcare professionals, deployment of applications for tracking infected patients. The Covid-19 crisis is a relevant example about the need for research in digital communications in order to understand current health info communication. After an overview of the challenges of digital healthcare, this book offers a critical look at the organizational and professional limits of ICT uses for patients, their caregivers and healthcare professionals. It analyzes the links between ICT and ethics of care, where health communication is part of a global, humanistic and emancipating care for patients and caregivers. It presents new digitized means of communicating health knowledge that reveal, thanks to the Internet, a competition between biomedical expert knowledge and experiential secular knowledge.
