*Radiation Protection in Medical Radiography, 7e: Amazon.co ...*

Radiation protection is based on the three fundamental principles of justification of exposure, keeping doses (of ionising radiation) as low as reasonably achievable (optimisation) and the application of dose limits. The International Commission on Radiological Protection (ICRP) is responsible for the development of these principles.

Radiation protection in radiography. The images in radiography are created by passing an X-ray beam through some section of a patient's body. They are recorded either on film or some form of digital media.

Generally, the images recorded on film are viewed as transparencies on a lighted view-box or illuminator and the digital images are viewed on computer displays.
