An extremely informative series (Biology of plants versions) well written and in depth. They ruined it with the 7th edition however, by putting two chapters( the ones on ecology) on the internet. So the book, even though it says it's 800 and some pages, actually is thinner than the old 6th version.

It's safe to say that few people have lived lives as thoroughly devoted to plants as Peter H. Raven has. The longtime director—now president emeritus—of the Missouri Botanical Garden, author of numerous leading textbooks and several hundred scholarly articles, Raven has been a tireless champion of sustainability and biodiversity, earning him the plaudit of "Hero for the Planet" from Time. Driven by Nature is the first chronicle of this prominent scientist and conservationist's life. Moving from his idyllic childhood in the San Francisco of the 1940s to his four decades leading the Missouri Botanical Garden, Raven's autobiography take readers across multiple continents and decades. Driven by Nature follows the globetrotting botanist from China to the American Midwest as he works to foster concern for a changing planet, further the cause of biological education, and build the Missouri Botanical Garden into the world-renowned haven for plant life it is today. Raven brings his story into the twenty-first century with a timely epilogue that reinforces the crucial importance of scientific learning, active conservation, and committed activism in the face of a rapidly changing natural world. Featuring an introduction by the Pulitzer Prize-winning naturalist E. O. Wilson, this beautifully illustrated book should thrill nature lovers, plant enthusiasts, and environmentally-conscious readers looking to take action to preserve our planet's biodiversity.
