Spectrophotometric Determination Of Chlorpheniramine

Right here, we have countless books **spectrophotometric determination of chlorpheniramine** and collections to check out. We additionally allow variant types and along with type of the books to browse. The normal book, fiction, history, novel, scientific research, as well as various further sorts of books are readily to hand here.

As this spectrophotometric determination of chlorpheniramine, it ends taking place visceral one of the favored books spectrophotometric determination of chlorpheniramine collections that we have. This is why you remain in the best website to look the incredible books to have.

A rapid and simple method for simultaneous determination of Chlorpheniramine Maleate (CPM) and Phenylpropanolamine Hydrochloride (PPM) by " Two Wavelengths Method " using UV spectrophotometer has been developed in combined pharmaceutical dosage forms. " The absorbance difference between two points on the mixture spectra is directly proportional to the concentration of the component of interest independent of interfering component " .

Spectrophotometric technique is considered to be the simplest and operator friendly among other available analytical methods for pharmaceutical analysis. The objective of the study was to develop a precise, accurate and rapid UV-spectrophotometric method for the estimation of chlorpheniramine maleate (CPM) in pure and solid pharmaceutical formulation.

A simple spectrophotometric method has been developed for the assay of chlorpheniramine maleate in raw materials and in pharmaceutical preparations. The method depends on the reaction of chlorpheniramine maleate with aniline in the presence of cyanogen bromide resulting in an intense yellow colour that has an absor

In this study a simple, rapid and sensitive spectrophotometric method was developed for the determination of an antihistaminic drug chlorpheniramine maleate (CPM) in pure form, pharmaceutical preparations, spiked humane urine and spiked blood serum. This method was based on the formation of ion-pairs between the basic nitrogen of the CPM drug and four chromogenic reagents namely bromocresol purple (BCP), alizarine Red S (ARS), eriochrome cyanine R (ECR), and cresol red (CR).

The use of ultraviolet spectrophotometry at 264 or 265 nm for DCM determination in syrup (oral solution) or tablets has been recommended by USP 28. However, the method is applied only after several alkaline and/or acidic extractions of the samples with ether or hexane, and back-extractions of the aqueous portions with the same organic solvent.

A new Spectrophotometric method was developed for simultaneous estimation of PCM and CPM in FDT. Among all six formulations, F2 with CCS 27% concentration found the best formulation. F2 resulted in best wetting time i.e. 26 sec, good water absorption ratio i.e. 81%, fastest disintegration time i.e. 20 sec and faster drug release within 25 min.
