Isotropic turbulence (in spectral space), Spectral space studies are always favoured by physicists and mathematicians due to their intensive use of spectral space to solve their problems while engineers would find some difficulty in understanding this chapter due to that they are unfamiliar with the use of spectral space tools.

At a larger scale, motion in the oceans and in the atmosphere is turbulent, so weather forecasters and oceanographers study turbulence. Turbulence is also important in geophysics, since it is turbulent convection in the core of the earth which maintains the earth's magnetic field despite the natural

forces of decay.
